

Solubor®

Foliar

B (20.5%)

Solubor is one of the more commonly used product names for disodium Octaborate Tetrahydrate ($\text{Na}_2\text{B}_8\text{O}_{13}\cdot 4\text{H}_2\text{O}$).

Benefits:

- Foliar applications of boron generally are more effective than soil application in supplying sufficient boron for flowering and reproductive development in crops.
- This product has a fine particle size and is more soluble than Borax, especially in cold water, making it the recommended choice for the application in solution.

B

BORON

- Essential for all plant growth, aiding in the transfer of sugars and nutrients from leaves to fruit, and for specific functions in yield production by increasing pollination and seed development.
- An important nutrient for root growth, cell division, and is key for optimum pod production.
- Its main function is for plant cell division (growth) in early growth stages.
- Plants have high requirements for boron during reproductive growth, specifically pollination and seed set.

Amounts of Solubor (20.5% B) to mix in spray tanks to supply of 0.5 lb of B/acre at various spray rates*

SPRAY RATE (GALS/ACRE)	SIZE OF TANK (GALLONS)					
	100	200	250	300	350	400
	POUNDS OF SOLUBOR REQUIRED					
10	24	49	61	73	85	97
15	17	33	41	49	57	65
20	12	24	30	36	43	49
25	10	20	24	29	34	39
30	8	16	20	24	28	32

*For tank sizes greater than 400 gallons, add the amount of Solubor for the desired spray rate from those which will add up to the size of a larger spray tank.

Application

- Used in soil and foliar sprays and in fertigation programs.
- Solubor is highly water soluble, and is commonly applied in foliar sprays.
- Compatible with most pesticides.
- Because the season for the most effective foliar application of boron is short, foliar sprays must be prepared quickly and accurately.
- Application rate is 2.4 lbs of Solubor, which provides 0.5 lb actual boron per acre.
